## Welcome

Shakeel iPhone Repair Guy is an authorized small business repair center providing first rate quality repair and service of mobile smartphones and other device in the San Francisco Bay Area. Shakeel's shop has been owned and operated since 2008. Shakeel was inspired to start this business when he was misled by a local iPhone repair shop claiming they use OEM parts. Therefore, Shakeel has thought himself how to repair Apple products and other Android devices and replacing parts without voiding factory warranty. The iPhone repair guy uses only factory quality parts, which fit and function the same way as it was brand new. Most repairs can be completed in 10 minutes.

All devices are fixed in plain view of the client to assure privacy and quality of work.

Mail-in service is accepted.

For more information call **(650) 861-2810**.

## Common Problems and At Home Solutions

### Solutions

Here are some solutions to help you save your phone from complete cell phone damage.

### Water Damage

- Take the phone out of the water ASAP, time could be a huge difference.
- If you dropped it in the ocean, wash it first with fresh water before salt crystals form. Take out the batteries and turn it off (to avoid a short circuit), also take out your memory card and SIM (dry them separately).
- Place your phone overnight in a bowl of uncooked rice—they have a high affinity for drawing out moisture.

### Electrical Damage

- Try switching Off and On button, if that don't work
- Switch the battery with a spare.
- Clean your battery with a cotton swab and rubbing or iso propyl alcohol.

OFF ALL  
PHONE  
SERVICES  
  
AVAILABLE:  
1K CONTACT  
IDEOS BACKUP

### Screen Display Problem

- Clean the display tips and display connector.
- Resold the display connector.
- Change the Display.
- Check Display track.
- Resold or change the display IC.
- Heat, Reball or change the CPU.

### Keypad Malfunction

- Try switching Off and On button, if that don't work
- Reset the device, the software may need to be reverted back to factory standard.
- Clean and remove debris around the keys. Sometimes particles of skin, oil and food can become wedged between the buttons may interrupt keys to being pushed fully.

### No Signal

- Try switching Off and On button, if that don't work
- Get a Femtocell, this mini cell phone tower covers 5,000 sq ft on average and works for approximately 8 registered phones.
- Signal Repeater, Booster or Amplifier, grabs an outside signal and repeats it inside your home.
- Keep your battery charged to 2 bars or higher, since your cell phone uses a lot more power when connecting a call trying to find a signal.
